1.05 Study Guide – Variations

Direct variation:

All direct variation equations are written in the form:

k refers to the __________________________.

The Steps for Solving a Direct Variation Problem are:
1.
2.
3.
4.
5.

Inverse variation:

All inverse variation equations are written in the form:

The steps for solving an inverse variation problem are the SAME as direct variation!

Joint variation:

Joint variation equations are written in the form:

The steps for solving joint variation problems are the SAME as direct and inverse. The only thing that differs is that you will use the joint variation equation instead!
